hoodini.sh

Magic? No, just numbers and bytes.

Robinhood Chain is a token every six seconds. We know which ones the winners actually bought.

Every launch read the moment it is tradable. Every proven fomo trader followed on chain, with the fakes stripped out. A copy bot that runs in public, a Telegram channel that prints it, and a referral link on every click out.

294K
tokens indexed since 9 Aug · ~14,400 new every day

$7.6M
of real trader money copied last week, 1,513 verified buys

5,990
fake "buys" aimed at copy bots in the same week — caught

Four pages. No roadmap slide with a rocket on it. Promise.

THE MOMENT

Retail found a new casino. It is on Robinhood's chain, and the door is an app called fomo.

25,000	tokens launched on Pons in one day (2 Sep)
$544M	Pons volume that same day
$5.95M	Pons fees in 24h — 4th of everything DefiLlama tracks
80%+	of the chain's volume is memecoins, not the stocks it was built for
Top 5	fomo on the US finance app charts, above Kalshi and Cash App
~40K	new fomo users a day
1 in 2	active Robinhood Chain wallets come from fomo
25	fomo traders up more than $1M in the last 30 days — on a public leaderboard

CoinDesk 3 Sep 2026 · The Defiant 1 Sep 2026 · Bitcoin.com News · Odaily · QuickNode · coinspot, all Sep 2026.

THE PROBLEM

Everyone copies the leaderboard. So everyone buys the fakes.

Every copy bot watches the same 60 wallets. The attack writes itself: make it look like a top trader bought your token, wait for the bots, sell into them. On the 69 accounts we track, **five out of six "buys" last week were not buys.** Three real examples from this week:

> **The spray.** One wallet paid $200 of "one" to six top traders in twelve minutes through Relay's website, then the token went to zero in 29 minutes. `Sunday 15:09–15:21 CEST`

> **The forged requester.** A pool wallet on Base funded $150–250 buys for unipcs, frankdegods and others for days, with each trader's own address typed into the request as "paid by". It fooled every rule that looked at the payer. `BUTTHOLE, PLUMBER · caught 7 Sep`

> **The real thing.** homerun put $2,500 into SILVERBACK through fomo; the request carried fomo's tag and fomo's fee. Our book was in four seconds later. `Sunday 12:22:54 CEST`

The tell is a tag in Relay's public execution record that only fomo's own app writes. Three lines of rule; a week of forensics to earn them; published in our handbook because publishing it does not help an attacker. **Every other copy product on the chain is still buying the sprays.**

WHAT IS BUILT — LIVE SINCE AUGUST, 47 RELEASES, ALL IN PUBLIC

ALPHA · RADAR · PAID

Every launch the moment it graduates with a six-signal trust ribbon, sellability measured on the token's real route. Momentum-ranked Radar. Who just paid DexScreener, and what happened next. Scan any address.

SIGNALS · TRADERS

fomo's proven traders followed on chain, buys verified, copied with a fixed ticket, managed by ladder, trail and stop. Paper and live books. A record per trader of what copying them actually returned.

T.ME/HOODINISIGNALS

Every entry as a card the moment the bot buys, outcomes replied under it, never rewritten. A private bot for alerts on starred traders. A handbook that explains every number, fakes included.

EXECUTION

One-click buy and sell through the user's own wallet, any pool version, multi-leg when needed. The bot's sealed-key wallet shadow-executes every paper trade and goes live with one switch behind gas and daily-loss guards.

HOW IT MAKES MONEY

Bot trading

The live book is the paper book with money in it. Last week's verified signals carried **$7.6M of the traders' own capital**, median ticket $2,000, from the 60 wallets that make the leaderboard — seconds after they act, fakes removed. The infrastructure is done; the clean public track record started 7 September.

Referrals

Every trader name, every channel card and every token page links out with our referral attached — to the trader's **fomo** profile and to the token on **fomo**. fomo adds tens of thousands of users a day and pays for the ones we send. The copy book is a reason to click every hour; it costs nothing to run and compounds with every follower.

> **Example.** A card lands in the channel: "NEW BUY — $SILVERBACK, based on @homerun buying in, spotted 4s after." Three buttons: hoodini, one-click buy, fomo. The reader who clicks fomo signs up on our code. The reader who buys on hoodini trades through our router. The reader who does neither still saw the bot's entry and, an hour later, its +51%.

Later: a premium tier of the channel with the bot's own fills, zero delay; and the buy-verification engine as an API — every wallet tracker and alert bot on the chain is paying for sprays today and would pay not to.

WHERE THE MARKETING MONEY GOES

We already rank for 294,000 token pages. Now we buy the attention that turns them into followers.

Search engines were **97% of our token-page traffic** before we even tried: every token on the chain gets a page on hoodini with the trust ribbon and the trader activity, and there are 14,400 new ones a day. That is the organic engine. The paid engine is the one this market actually runs on: **X**.

X influencer campaigns 40%	SEO content 25%	Channel growth 20%	Referrals 15%

Illustrative split of the first-year marketing budget. Final numbers with the round.

PAID: X INFLUENCERS

- **Monthly retainers with 6–10 Robinhood Chain and Solana memecoin accounts** (50K–500K followers) posting the channel's best calls with the receipts — the card, the entry time, the outcome.
- **"Who bought first" threads** — the fake-buy forensics as content. Nobody else can publish these; they are ours.
- **Referral bounties** for creators: their own hoodini code on fomo and Axiom links, paid on what it earns.

ORGANIC: SEO & THE HANDBOOK

- **Token pages** — one per launch, indexed within minutes, ranking for every ticker and contract address anyone searches.
- **Trader pages** — "is @homerun worth copying" answered with a measured record, not vibes.
- **docs.hoodini.sh** — how a buy is told from a spray, the six signals, the chain. Reference content that keeps ranking.

> **Example month.** Eight X accounts on retainer post two receipts a week each: 64 posts, every one linking a card and a code. The handbook chapter on fake buys goes out as a thread from @hoodiniapp. Channel goal: from launch week to 10,000 members; every member is a click on fomo we get paid for and a reader of the bot's book.

We are raising a seed round.

Live capital for the bot, sized up in measured steps · the marketing budget above · three hires: a **Node.js developer**, **marketing**, **social media**. Built by **chronic.ro**, led by **Robert Schmidt** — twenty-plus years programming, three in crypto. Terms and the deck on request: **message @hoodiniapp on X**.
